SWISS Solutions Moulded Grating

Creating a safer environment

Renewing of the gratings on board of the Dutch M/V Arca under the oil sweeping booms.

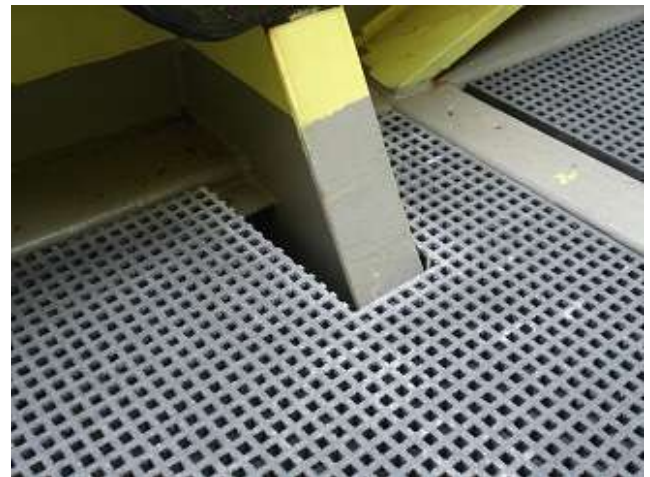

For many years galvanised gratings are used. The problem of this type of gratings are especially on board of seagoing vessels that in this environment they start corroding. Another problem is when the area under this gratings must be cleaned those panels very heavy so its for the crew not the most easy to handle this.

They have chosen now for the Moulded Gratings with an embedded grit top surface from Swiss Solutions because all of the benefits of this product. This Moulded Gratings are supplied in a standard Grey colour and where cut in the right dimensions in the factory. Only small cuts at some points had to be made on board.

Cutting panels with Jigsaw

Only small cuts had to be made on board

Before, the corroded steel gratings

After, the new Swiss Solutions Gratings
