FOX-LED IP40 Indoor Luminaires

The Vyrtych FOX-LED IP40 luminaires are chosen by **Boskalis** as indoor lighting for the Portocabins and canteen cars on site. **Energy savings** is a key point for Boskalis. The wish was to replace all Fluo luminaires for LED luminaires, which would result in a significant reduction in energy consumption. Another point was that the new lighting must have a long lifespan, including a compact design, quick and easy installation and another very important fact it had to be so-called flickering-free lighting (PstLM = perception of short-term light modulation) with an extreme low glare (UGR value) light image. The FOX-LED is a luminaire that meets all these requirements. The luminaire is a fully European product, developed and produced in the Vyrtych factory in the Czech Republic. Body, diffuser and LED (PCB) modules are produced by Vyrtych and for the LED drivers Vyrtych uses the European manufacturers Tridonic from Austria and Helvar from Finland. These manufacturers develop and produce high-quality LED drivers to Vyrtych's desired specifications. For this Portocabins and canteen cars 600mm and 1103mm long FOX-LED were installed. They covered the old screw points in the ceiling. The advantage of the FOX-LED is that due to the IP40 protection it can also be used in sanitary areas.

EU / SLR Directives

From **August 25, 2023** there is a ban on many Fluorescent lamps including the widely used T8 & T5 tubes.

In various steps, types of light sources have been phased out already for years and are therefore no longer produced or imported into the EU. Reasons include the need for reducing energy consumption and reducing hazardous and environmentally substances (RoHS).

Ready for the future

Boskalis has already taken the step to be future-proof with the installation of the new LED lighting.

PstLM standards from 09-2024

Boskalis meets already the future standard regarding Perception of momentary light modulation with this FOX-LED luminaires.
