

ATEX Explosion-proof LED Hand lamps with cable

Explosion-proof compact handlamps are the ideal tool for all kind of inspection and service work in confined and hard-to-reach areas. The lights distinguish themselves by a low weight and compact design. They provide a uniform light with a low glare. The lights are available in several voltages and light outputs. A range of accessories completes the range of products, such as safety transformers, and ATEX safety plugs. For dirty work there is a protective antistatic foil available for protection of the light. This foil is easy to replace. For most of the lights there is a large choice in cable lengths available. The high IP rating protects the light against water ingress. All lights are fully ATEX certified for safe work in environments with a risk of explosion.
