Never use damaged slings. Check always before starting lashing operation.

Lifting Equipment Lashing Straps Corner Protectors

Estil Corner Protectors for lashing straps

Corner protectors prevent premature wear on the lashing and straps due to sharp corners. The protectors placed on the sharp corners extend the lifespan of the strap but more importantly increase the safety of people who work with it. The corner protectors also prevent boxes and other fragile load to be cut in by the lashing straps.

Type HO can be installed very quickly due to an opening in the belt feed.

Type HG is a very solid one piece molded corner protector. Due to material choice, the lashing strap slides easily over the corner protector. The special shape and construction ensure a reduction in pressure on the load to ensure optimal protection of the load. Remains very usable even at freezing temperatures.

Type HV is very flexible which makes it very suitable to use on loads with unequal corners.

All corner protectors come in sets of 2 pieces.
