

RMN NEWSLETTER

We are happy to introduce our first **RMN NEWSLETTER**. This newsletter comes in addition to the Wencon Shipping News. With this new type of newsletter we inform you as customer on more than only the Wencon news items. This RMN TECH NEWS shows information about the other brands we represent. Not only product news but also articles about our services. Even our exclusive RMN Service Partners and dealers will show up in the newsletter with possibilities they offer. Our goal is to send this newsletter at least 4 times a year to show you the latest news regarding products for Marine, Offshore and Industrial use.

Swiss Solutions

An exclusive RMN brand with a range of high quality products for all kind of applications, produced by well selected first class manufacturers. Swiss Solutions products are: Moulded Gratings, Stair Threads, Oil Spill Kits and Oil Absorbent products, LED Floodlights, Rust Converter, Industrial Wipes, Industrial and Hygiene Papers and Big Bags.

Swiss Solutions Oil Spill Absorbents

Oil spill is a common problem, not only on board of a vessel but also on shore. Swiss Solutions offers a complete range with oil spill absorbents and pollution containers. The high quality Oil Only Absorbents are available in many different versions such as pads, booms, socks, rolls, mats etc.

Swiss Solutions Oil Pollution Containers

In the range there are standard Oil Pollution Containers complete filled with all the right materials to act fast in case of an oil spill. Sizes are 1100 liter, 7 barrel, 12 barrel (according to IMO OPA and US Coast Guard regulations). The heavy duty containers are watertight and corrosion free and made of a strong GRP.

Custom Made Oil Pollution Containers

Another possibility is to order custom made Swiss Solutions Oil Pollution Containers to meet the customers need with the right products for their application.

For disposal of the used contaminated products there are special Swiss Solutions Oil Waste Bags or Oil Waste Big Bags.

GreenOil Standard®

GreenOil Standard is a young and innovative company designing, producing and marketing a series of off-line filters breaking the traditional way in which oil cleaning has been performed for decades. Since 2003 hundreds of filter systems has been installed onboard all types of vessels and in the industry. Leading ship owners and industrial manufacturers have invested in GreenOil products in order to improve operational stability and save maintenance costs.

GreenOil Standard® Water Separation Systems

The unique patented water separator units are developed for Maritime and Industrial use with materials for all weather conditions. The product range offer a wide range of solutions for removing both free, emulsified and bound water in oils used in hydraulic systems, gearboxes, transmissions and engines onboard ships and in the industry.

Functionality

GreenOils unique, maintenance free water separator dries out all phases of water ensuring maximum performance and improved life time for both oil and machinery. The principle operates with heated dry air in a continuous process which avoids stressing of the oil. The separator continuously removes free, emulsified and bound water without any use of consumables.

Easy Installation

The unit can easily be installed on new equipment or as a retrofit on already operating equipment without interfering the basic operation. Unit comes both with and without a pump. Just connect suction, pressure line and electrical power and you are in operation. With our service partners we offer also installation service.

GreenOil Standard® Filter inserts

GreenOil filter inserts are filled with sheepwool and not with cellulose materials. All GreenOil filter inserts are designed for optimal dirt holding and maximum filter performance. The filter canister enables **fast filter replacement without physical contact with oil**. Tests have shown that GreenOil filters remove soft contaminants that are precursors for the formation of varnish in the oil. Consequently, GreenOil filters continuously keep VPR (Varnish Potential Rating) below critical figures even in systems with high loads and elevated temperatures. Filter rating specifications according to ISO 4406:99 at B(c) = 75.

GreenOil Standard® MDO Filters

GreenOil Standard complete systems for maintenance and transfer of Marine Diesel and Gas Oil. The complete range of the WP1-C1 filter units are used for continuous off-line filtration and water separation of marine diesel and gas oil. The units are used for cleaning of marine diesel in tanks or as a transfer system from settling/bottom tanks to day tank. The unit removes particles and water from the marine diesel and gas oil.

RMN NEWSLETTER

Denfoil Maritime

Nordic Denfoil is the leading manufacturer of safety signage for the maritime and offshore industry in Northern Europe. The company is a part of an international printing group who has established itself as a leading provider of various signs for example to the expanding windmill industry and other land based and offshore companies. The Denfoil brand is known for its high quality photoluminescent safety products and the company has always continually developed new methods in production and testing new material for improving the standards within the photoluminescent market. Denfoil Photoluminescent Self Adhesive Signs are printed with a special technique on the highest quality 3M foil to ensure better visibility, durability and safety.

RMN offers the complete range of Denfoil IMO and Safety Signs including Pipe Marking Tapes, Non Slip Self Adhesive Tapes, Photoluminescent tapes and Solas Tape. Most of the products are direct available from our Rotterdam warehouse.

TERCOO®

Tercoo®

Tercoo® rotating discs is a product for removing of rust, layers of dirt such as glue, paint etc. It remove this from different materials such as iron, metal, stone and concrete. The result after this surface preparation is almost the same as with shot blasting. Tercoo® is the best way of surface preparation when blasting is not possible. There are 3 different Tercoo® discs for use in a standard drill. The Tercoo® tool is a rubber disc with 12 steel tubes vulcanized in it. Special conical shaped tungsten steel pins are mounted in the tubes. The disc is made of 96% natural rubber which provide it's flexibility. When the disc is rotating the pins are moving in different directions. This will give a hammering effect on the surface to achieve a clean surface and a good surface roughness. The best results gives a rotation speed of 2500-3000 rpm. At a lower speed the effect will be less but the disc is than more flexible with the possibility to reach difficult places such as corners. In this situation a speed of 1200 rpm is recommended. Especially for bigger areas Tercoo® offers a special machine for use in combination with an 8-layer Multi Disc.

RMN is for the Marine and Offshore the exclusive distributor in the Benelux and can deliver direct from stock.

MOLDEx

Moldex

Protecting people against harmful vapours, gasses and dust is an important issue. The Moldex series 7000 and 9000 reusable half mask and full face mask provide comfort and safety together. Made of a soft and skin friendly TPE, easy maintenance and cleaning without tools. Moldex Easy Lock® system for easy handling, filters can be changed fast and easy. A revolutionary design, no additional adapters or parts are needed to make the right filter combination. With this special lock system, filters can be combined together. Masks are available in 3 different sizes and according to EN140:1998 and EN136:1998 CL2 or for the full face mask also with standard screw thread connection E 148-1. A wide range of filter cartridges is available.

Prolumia LED Luminaires

Waterproof IP65 LED Luminaire Series Pro-Area & Pro-Aqua, a high efficient alternative for fluorescent luminaires.

The series Pro-Area is made of an extruded anodized aluminium housing with a polycarbonate diffuser, attached by stainless steel clips. Available with integrated microwave sensor, featuring adjustable detection range, time span and daylight level (light only switch on, if illuminance level is lower than set value. With integrated motion sensor or an additional link, it can be switched between 0% - 100% or 20% and 100% light output. Fixtures with and without sensor can be combined as master/slave (max. 15 fixtures). Additionally, the Pro-Area is also available with an emergency unit. Available in 3 lengths and in 4000K & 6000K light color. Light output from 1150 lumen up to 4600 lumen.

Prolumia Pro-Aqua

The series Pro-Aqua is a great alternative for standard fluorescent watertight luminaires. Grey housing made of UV stabilized polycarbonate, the semi-transparent polycarbonate shield is attached with stainless steel clips. The SMD-LED's are mounted on an anodized mounting plate, which also act as a heat sink and offers an improved cooling. (Pendant) mounting is possible with stainless steel mounting brackets. The luminaires are suitable for through wiring. Required cable glands and fasteners are included. Available in 3 different lengths in the 4000K light color.

PROLUMIA®

Ega Master
ART IN INNOVATION

HOW TO WORK SAFE ON HEIGHTS

Protect your people against dropped tools.

Anti-Drop Tools becomes more important in the Oil and Gas Industry. To prevent injuries

Ega Master developed a complete range with Anti-Drop Tools for working on heights.

Lanyards and tool-belts are completing this range.

Ega Master is Member of the Drops organisation.

DROPS : Dropped Objects Prevention Scheme

Within the oil and gas industry, everyone knows the potential cost of a dropped object.

It's not just about equipment and lost production. It's about life! The problem is common to everyone in the industry, across all regions, sectors and disciplines. DROPS is an industry-wide initiative focused on preventing dropped objects, with the ultimate goal of delivering a second nature dropped objects prevention strategy across our industry. DROPS is essentially a Global Work Group, represented by over 100 operators, contractors, service companies and industry bodies, all sharing commitment and enthusiasm for the common goal of dropped object prevention. The current DROPS Global Steering Committee is represented by BG Group plc, Britannia Operator Limited, BP, Chevron, Shell UK, Statoil, Talisman Energy and Transocean.

The complete range with this Ega Master can be found on our website and in the special Safety Catalogue of Ega Master.

Edge Safety the Lifeline to Safety

This Dutch manufacturer develops, produce and market a complete range of high quality fall protection devices, such as harnesses, lifelines (with or without shock absorbers), self-retracting lifelines (blocks), Tripots, Lanyards with clamps for vertical work on different heights, positioning lines etc.

With this manufacturer we also take care for your annual testing and certification for all your fall protection devices (also from other brands).

New are the Edge Safety Harnesses as a combination of a safety harness and inflatable lifejacket for working and rescue offshore on windmills and heights on board.
