## CORONA (COVID-19) Update

Since the major outbreak of the Corona Pandemic, many of us are working already several months from home.

Slowly there has been some improvement, offices are opening again with a low number of people. As long as there is no vaccine available it will be uncertain how everything will develop and how long it will take. Together we do everything what is possible to keep the economy going and measures are taken to work according to the current regulations.

To meet personal hygiene requirements it is important that disinfectants are available at offices and workplaces. Also pictograms and stripes on the floors guide people in the right direction and show them how to keep the right distance from each other.

Since we leave the intelligent lockdown step by step we as RMN can have visitors at a limited base.

Our company is been set up on the required temporary 1,5 meter distance society and it means also that visitors must make an appointment.

On both our office and warehouse entry we have the possibility to disinfect the hands.

We thank you all for your understanding and hope to meet you again soon in a way that everything went back to normal.

In the meantime we wish you a good and healthy summer on behalf of the entire team of RMN.

Do not only take care of your own health and safety, but also that of others. Together we overcome this health crisis.

If your company is in the need for a **disinfection column** or **various disinfectant**, please let us know.

We supply various of these products direct from stock.

Summer 2020

More management less firefighting

## NTE SISTEMAS

*More than light*

### New RMN Distributorship per June 2020

RMN has become the Benelux Distributor for the Spanish manufacturer NTE Sistemas. This manufacturer is specialized in LED lighting solutions for indoor and outdoor applications.

One of the keypoints for RMN are the high efficiency **LED Floodlights**. NTE develops and produce the complete product in its own factory in Spain. Especially during the Corona Crisis, we have seen the importance of working with European manufacturers. RMN was therefore able to process many orders within the agreed delivery time. The LED lighting from NTE is characterized by the extreme high lumen/watt ratio, which means a considerable energy saving. Both the LED Floodlights and the LED Road Light luminaires can optionally be equipped with a special **Marine Anti-corrosion treatment**, which makes them suitable for use in saltwater environments, such as harbor areas and on board of ships. If desired the floodlights can be equipped with an emergency power battery, a motion detector and a dimming function.

The Road Light Luminaires are also characterized by a very low energy consumption and many types can be used in combination with the **NTE Solar Kit** for us in areas where there is not a normal power connection.

## SOLAR

MAXIMUM AUTONOMY COMBINED WITH THE  
HIGH EFFICIENCY OF OUR ROAD RANGE

*More than light*

## NTE SISTEMAS

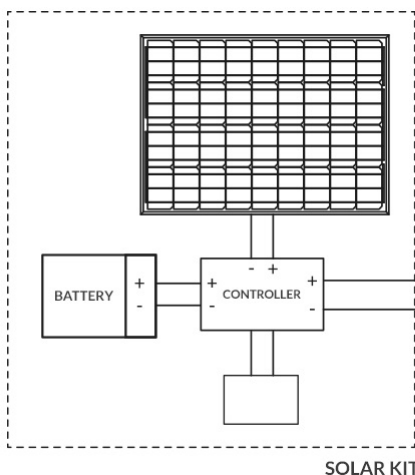

### 100% Energy savings with maximum respect for environment

The NTE Solar series includes state-of-the-art LED technology, a programmable lighting system and light intensity control. Being able to reach a height of 7 meters, it is the ideal option for rural roads, bike lanes, pedestrian walks, construction sites, jetties etc. With the possibility of including a presence detector for a minimum light pollution, especially in isolated areas, maintaining the safety for people all the time.

The **Solar Kit** is available in 4 different versions and can easily be combined with the various **NTE High-efficiency LED Road Light Luminares**. The Solar Kit consists of a solar panel, a Lithium-ion battery with high capacity and a low weight in combination with a great durability (minimum 5 years of use) and is IP66. Easy to mount on any standard mast and up to 5 days of use depending on the lamp model.

The LED Road Luminares are available in many different designs and light outputs. Available in different optics to meet the customers requirements. The **LED3535 L90B10** has a superior efficiency and a very high lumen/watt ratio. The estimated service life is **>100.000 hours**. The luminaires can optionally be equipped with a special Marine Anti-corrosion Coating for extra protection in environments with a salty air, such as coastal areas and harbors.

The complete luminaires are produced in Europe, which ensures fast delivery and a high degree of flexibility.

## DOUBLEPOWER!! *A new standard in durability*

### DOUBLEPOWER!!

In a very short period of time the **doublepower!! SEA LED** has become popular and is a much ordered and wanted luminaire for applications on board of seagoing vessels.

After thorough testing by a number of large shipping companies, RMN received various orders for **re-lighting** of multiple ships.

A big advantage besides the high quality, good warranty, long service life, high lumen/watt ration, salt water resistance and good anti-glare factor is also the short delivery time. Various luminaires are in stock at the RMN warehouse and therefore can they be delivered very quickly. The entire luminaires are produced in Europe, which is certainly of great importance at this moment. Together with this flexible manufacturer we can also implement special wishes of the customer. Requests for high quality LED doublepower!! luminaires also come from other sectors, whereby we can make extensive light calculations for the customer.

Due to the high sales the production capacity of the SEA LED has already been increased.

## DAIKIN MARINE *Air Conditioning*

### RMN supplier of Daikin Marine

RMN can also supply Daikin Air Conditioning Units for Marine applications. Several deliveries are already made for sea going vessels. This is included special split-units approved for ATEX environments.

**Daikin Packaged Unit** air conditioners are used to stabilize the high temperature of mechanical and electrical rooms where heat collects. They delivering high efficiency and a wide operation range.

The picture shows an example of a large Packaged Unit from the US Series ready to ship to the customer.

## SWISS SOLUTIONS GRE/GRP PRODUCTS

**Swiss Solutions Moulded Gratings** are used on many seagoing vessels. It is a very good substitute for steel gratings in many places on board and there are a large number of advantages over the steel gratings. The product does not corrode, it is flexible and strong, very good non-slip, lighter in weight, fire retardant, chemical resistant and can easily be cut to the right dimensions. RMN supplies the moulded gratings standard in a glass fiber reinforced **Isophthalic Polyester Resin**. This resin is very chemical resistant. The panels are available in various sizes and heights as well in a number of different colors. The panels are easily mounted using the Swiss Solutions Stainless Steel AISI316 mounting clips and fasteners.

In addition to the Swiss Solutions Moulded Gratings there are many other GRE/GRP products for various applications. All these products have been developed with the aim of increasing personal safety.

Commonly used are the "**Deck Grip Strips**", the "**Ladder Rungs**" the "**Edge Grip**" and the "**Slip Grip Stair Tread Covers**".

With this range of products we mainly create ladder-, stair- and deck safety. The products are available in various sizes and colors and can be ordered with a fine or a coarse non-slip top layer.

On the right picture we see an example where the gangway at the dock did not provide sufficient personal safety and the user asked us to offer a solution without replacing the gratings. By installing the **Swiss Solutions "Deck Grip Strips"** the correct personal safety for foot traffic has now been met the requirements of the customer.
