

# Swiss Solutions Precision Stair Tread Covers

Creating a safer environment

## Product description

### Precision Tread Tread Covers

The Swiss Solutions Precision is an aluminium stair tread cover ideal for environments with heavy footfall requiring a stylish and modern anti slip tread solution. This premium step cover combines aluminium with anti slip resin inserts. Drilling with mechanical fixing is recommended with Precision Tread Covers. Can be installed easily and quickly with the available fixing kits.

## Suitable substrates

Wood, concrete, stone and metal.

## Suitable applications

Fire escapes, all staircases, stadiums, restaurants, theme parks, areas of extreme foot traffic that require a less industrial look.

## Product characteristics

15 year guarantee provided with this product. 55mm DDA compliant nosing. Available with yellow or white nosing and inserts. Safe, smart and contemporary look. Internal and external use. Chemical resistant wearing surface. Heavy footfall. Easy and quick installation.

### Technical data

Standard lengths for stair treads: 1000mm  
1500mm

Stair treads profile: 200mm  
Cut to size service: No  
Thickness: 8.5mm  
Service temperature: N/A  
Fire retardant: No

Available colours: Black with yellow nose  
Black with white nose

Impact resistant: Yes  
Corrosion resistant: No  
Chemical resistant: No  
Lightweight: No  
Non sparking: No  
Non Metallic: No

Fixing: Please refer to the Slip Grip Stair Tread Covers installation guide for full details

### Slip resistance test results

Slip Grip Heavy Duty GRP slip resistance levels measured using the Pendulum Test method (WF rubber slider).

Slip resistance of a floor for able bodied pedestrians. The higher the value the safer the floor.

Top surface	Dry reading	Wet reading	Four S Pendulum value	Potential for slip
Medium grit	73	69	Above the 65 35 to 65 25 to 35 25 and lower	Extremely low Low Moderate High

To ensure that the above slip resistant levels are maintained the panels should be kept clean in accordance with the information

### Cleaning and maintenance

Use of a stiff brush will usually be sufficient when cleaning the Slip Grip Precision Stair Treads to remove every day dirt. For more stubborn items, it is recommended that a mild detergent such as a mild degreaser is used and then rinsed with cold water. It is important to remove any excess water from the stair treads prior to being put back into use with suitable absorbent materials. Where circumstances allow, Slip Grip Precision Stair Treads can be power washed on a low setting. If Slip Grip Precision Stair Treads has been sealed with a sealant; repeated use of a pressure washer could undermine the integrity of the sealant. The security of the fixings should be checked on regular basis. Circumstances will vary, based upon the volume of foot traffic etc., but as a guide, monthly inspections would be advisable.

### Handling & storage

Safe handling practices should always be employed and the appropriate Personal Protection Equipment is to be worn. Store the stair treads flat and upside down.

### Personal protection equipment

It is recommended that the following Personal Protection Equipment is worn for installation of the Slip Grip Precision Stair Treads and further protective measures may be necessary but this will depend on the installation environment:

Bonding: Use eye goggles, protective gloves, safety boots

Mechanical fixing: Use ear defenders, eye goggles, dust mask (Fine dust), protective gloves, safety boots.

## Creating a safer environment

### Cutting

The Precision Core Stair Tread Covers cannot be cut. There are only two length dimensions available, 1000mm and 1500mm.

### Preparation

Ensure that the area is clean, dry and free of loose and friable material. Any "dished" or damaged surface areas should be patch repaired to provide a reasonably flat and consistent surface.

Dry fit all Stair Tread Covers to ensure they fit freely and that they sit flat down on the surface.

### Fixing kit application

Apply at the underside of the Precision Stair Tread Cover special adhesive in approx. 25mm from the edges. Working on a porous surface requires a surface primer to ensure a good adhesion of the adhesive to the substrate. Prior to applying any adhesive it is advisable to carry out a dry-fit first to ensure a suitable fit. Next step is to make a mechanical fixing. The adhesive fixing is the double fixing method offers a secondary fixing in the unlikely event that a mechanical fixing fails. The adhesive also works as a sealant and can be used to seal around the edges and stop water lying in between the Stair tread Covers and the substrate. Water will not affect the Stair Tread Covers but can affect the substrate causing rot or rust.

### Mechanical fixing

Slip Grip Precision Stair Tread Covers can be drilled and secured with stainless steel fixing screws. It is recommended to use the flooring

sheet fixing kit available from Swiss Solutions. Follow the preparation procedure prior to fixing.

- 1) Always ensure that the screw length is slightly longer than the plug length to obtain a good fixing if not using the Swiss Solutions fixing kit.
- 2) Use Mastic adhesive on the underside to prevent the GRP drumming and rocking on the substrate.
- 3) Fixing is generally recommended at approximately: 70mm from the front, 50mm from each side, 60mm from the back, at a maximum of 250mm apart.
- 4) If fitting to a metal substrate, use self-tapping screws. There is no need to counter sink the screw holes since the screw can be tightened so that it beds into the gritted surface, making it flush with the wearing surface.

The above installation instructions are to be used as a guide. Always employ safe practices. It is recommended to first test the suitability of any fixing method on a small area before carrying out a full installation programme.
