

VBS ISOLATION MOUNTS

For years, Mascoat has helped make vessels quieter with Sound Control-dB Sound Damping Coating

Building on the tradition of keeping crew and passengers safer and more comfortable, Mascoat is proud to introduce VBS Isolation Mounts. These durable, effective brackets can secure and isolate a suspended ceiling with no metal-to-metal contact between the ceiling rail system and the superstructure above. This means that vibrations traveling through the ship will be decoupled from the suspended ceiling, making for a much quieter vessel.

Brackets are available in 25 and 50mm heights.

Easily to adjust the mounts.

3 different rubber densities

Safety lock system.

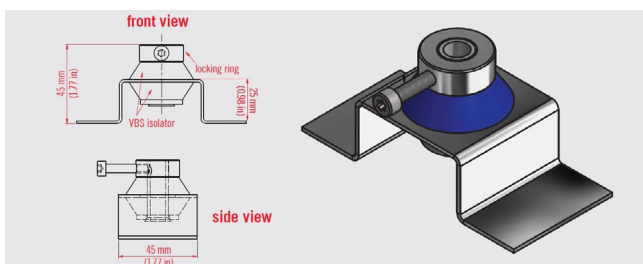

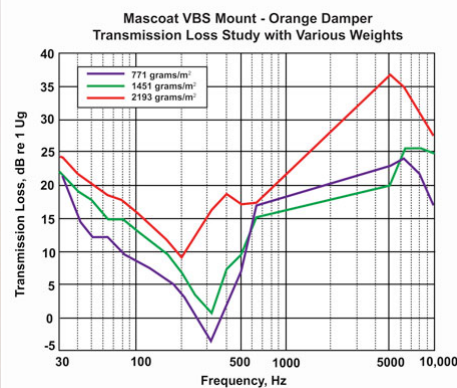

Quick and easy installation.

Can be used with the most existing rail systems.

Versatile use for workboats and yachts.

Depending on weight and fire requirements, mounts are adaptable to multiple configurations without sacrificing performance.

Helps vessels meet ABS (American Bureau of Shipping) HAB++ standards for livability, which offers stringent criteria for increased crew comfort and safety on workboats.

LIMIT VIBRATION TRANSFER

between suspended
ceiling and superstructure,
reducing panel noise

RAPID INSTALLATION

with no need for multiple
bits to attach and tighten
the brackets

LOCKING PIN AND RING

are able to be reversed,
allowing for crucial space
saving

SAFETY LOCK SYSTEM

ensures that ceiling
will be secure in
the event of fire
